

Warmline

The warm-intro marketplace

Post an ask. We find who in your warm network matches — then draft the intro your mutual friend would send.

The best opportunities come through warm intros

Warm introductions convert **up to 10x better** than cold outreach.

Yet there is no marketplace for warm introductions.

"I need someone who knows payments infrastructure" — how do you even start?

Every incumbent is one-sided and inferred

Product	How it works	The other side
LinkedIn	You search	Never opted in
Happenstance	Algorithm guesses	Data scraped
The Swarm	You browse	Profile inferred
Vieu	Contact scraping	No declaration

The person on the other end never raised their hand.

Warmline flips it: two-sided + declared

Everyone declares **two** things:

- **Offer** — who you are and what you can help with
- **Ask** — what you need right now

Post an ask → **semantic match** against declared offers across your warm network (1st + 2nd degree) → see the **mutual who connects you** → one click drafts the intro.

Both sides already raised their hand. That's the difference.

Live demo — the golden path

Ask: "a technical cofounder who knows payments infrastructure"

1. Ranked warm matches → **Samuel Okoro**, ex-Adyen, #1
2. Zero shared keywords with "billing and ledger systems at Adyen" — **semantic**
3. Graph animates: **You** → **Priya Nair** → **Samuel**
4. One click → **Claude drafts the intro in Priya's voice**, double-opt-in

No keyword overlap. Routed through the friend who can actually make the intro.

GTM & onboarding — where the graph comes from

Step 1: Import LinkedIn connections to map **who knows whom** (edges only).

Step 2: Each user declares their **offer** and **ask** — always explicit, never inferred.

Who pays:

- Recruiters filling senior roles
- Founders raising or hiring

Where Warmline goes

A two-sided, declared layer over a warm second-degree graph.

Nobody is doing this.

Next: **mobile + push notifications**

"Someone in your network can help with your ask."

That's the whitespace. That's what we built.
